EDUCATION

University of Central Florida

Bachelor of Science in Computer Science

Relevant Coursework: Calculus 3, Intro to Python, Intro to Java, Computer Science 1

Expected May 2029

Orlando, FL

TECHNICAL SKILLS

Languages: C, JavaScript, TypeScript, HTML/CSS, Python, Java,

Frameworks: React, Express.js, Tailwind CSS, Next.js, Tauri, Electron

Developer Tools: Git, GitHub, VS Code, MongoDB, Figma

PROJECTS

ElderWatch | *React, Python, Snowflake*

HackUSF 2026 Winner

- Worked with a team of **four** to develop a **hackathon-winning** real-time elderly monitoring dashboard, processing live camera feeds through **YOLOv8** and streaming structured event data to a **Snowflake** SQL database
- Architected the **React** front-end dashboard with real-time data binding, enabling live camera input and instant display of AI-generated contextual insights from **Snowflake Cortex**
- Maintained a **sub-3-second** end-to-end pipeline from webcam frame capture through **CV inference**, **Snowflake** ingestion, and dashboard delivery

Flaming Notes | *React, TypeScript, Tailwind CSS, MongoDB, Go, Gemini AI*

- Developed a collaborative note-sharing platform with a team of **four**, enabling students to upload notes compiled into a Wikipedia-style page via **Gemini AI**
- implemented the front-end file upload interface using **React** and **TypeScript**, integrating it with a **Go** back end that stored and processed notes through **MongoDB**
- Established **100+** AI-generated quiz questions and note feedback features, allowing users to self-assess and improve their uploaded study material

PngPal | *Python, React, Electron, Flask, ElevenLabs AI*

- Built a desktop overlay application with a team of **four** using **Electron** and **React**, embedding an AI finance chatbot accessible system-wide on any open window
- Bridged the front end and back end via a **Flask** server made in **Python**, using hooks to sync the **ElevenLabs** chatbot state and conversation transcript in real time
- Achieved a sub **5-second** end-to-end voice response time from user speech input through **ElevenLabs** processing and audio playback

EXPERIENCE

Full Stack Developer

Feb 2025 – Apr. 2025

Knight Hacks Project Launcher

Orlando, FL

- Collaborated with a cross-functional team of **six** to architect and ship a full-stack social event web app using **React**, **Tauri**, and **MongoDB**, connecting users planning to attend similar events.
- Integrated **MongoDB** CRUD operations and schema design to enable persistent user and event data storage that supported **5** core app features.
- Synchronized the **React** UI with **Tauri** and **MongoDB** to establish a consistent data layer across the app, enabling teammates to integrate their features without conflicts.

Pinch a Penny Pool Supply

June 2023 – August 2025

Sales Associate

Miramar, FL

- Served **100+** customers daily across sales, water testing, and chemical recommendations in a retail environment
- Performed **50–100 water tests** per day, diagnosing pool chemistry issues and recommending chemical treatments
- Diagnosed and repaired **30+ pool vacuums** weekly, delivering fully serviced units back to customers

ACTIVITIES

KnightHacks: Engage in weekly workshops and seminars provided by the club to hone my knowledge on Computer Science, and to prepare myself for Hackathons and future opportunities involving programming.
